Business Card Scanner

Scan your Business Cards / Photographs and export to Microsoft Excel, Mobile phones, PDA Devices in seconds

As simple as A B C ..., **A Business Card scanner!**

A well defined data base is crucial for the success of any business. Every piece of information gathered is the building blocks like 'DNA' for any business. After all you have spent years to collect this data in form of business cards.

When ever you finish meeting or meet people you exchange business cards and you know that the information each card has, is very important for your business growth. That's where you preserve these cards!

In real world it rarely happens that you type this valuable information into your computer. Cards pile up in a drawer or on the desk. You wish to key in the data but simply don't do it as it's a tedious job and so far there was no solution which could do it automatically. Not any more!

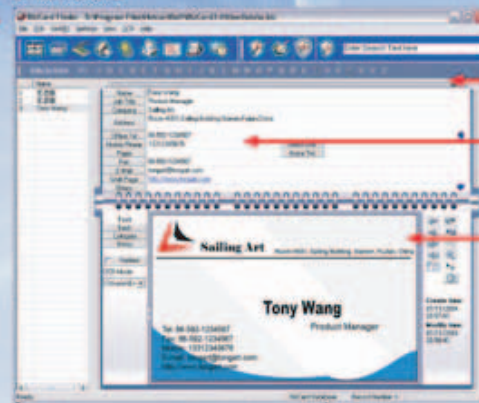

Hotcard business card scanner is a desktop device that quickly and accurately "reads" cards into the correct fields forming an electronic address book instantly, distinguishing name, street, email addresses, fax, phone numbers, cell numbers etc., in seconds. Once scanned the data is ready at your fingertips.

In the real world, Hotcard Business Card scanner means business productivity.
